OVERVIEW

Nippon Life India Asset Management Limited (NAM India) is the asset manager of Nippon India Mutual Fund (NIMF). Nippon Life Insurance Company (NLI) is the promoter of NAM India and currently holds majority of its total issued and paid-up equity share capital.

NLI is a Japan's leading private life insurer and offers a wide range of financial products, including individual and group life and annuity policies through various distribution channels, mainly using face-to-face sales channels for its traditional insurance products. It primarily operates in Japan, North America, Europe, Oceania and Asia. NLI conducts asset management operations in Asia, through its subsidiary Nissay Asset Management Corporation, which manages assets globally.

NIMF is one of India's leading and one of the fastest growing mutual funds in India. It offers investors a well-rounded portfolio of products to meet varying investor requirements. NIMF constantly endeavours to launch innovative products and customer service initiatives to increase value to investors.

Presently, NAM India has the following subsidiaries:

India

Nippon India ETFs

What is an Exchange Traded Fund (ETF)?

ETFs are essentially mutual fund schemes which replicate an index that are listed and traded on an exchange like stocks. ETFs can be bought and sold throughout the trading day. Buying/Selling of ETFs is as simple as buying/selling of any other stock on the exchange allowing investors to take advantage of intra-day price movements. Other advantage of ETFs is that you can buy even one unit and hence take exposure of the entire index at very low amounts.

ETFs can be bought and sold just by a call to the broker or through the online trading account. This provides an opportunity to the investor to respond to changes in the market and even place limit orders while trading.

Thus with ETFs, one can benefit both from the flexibility of a stock as well as diversification of an open ended mutual fund scheme.

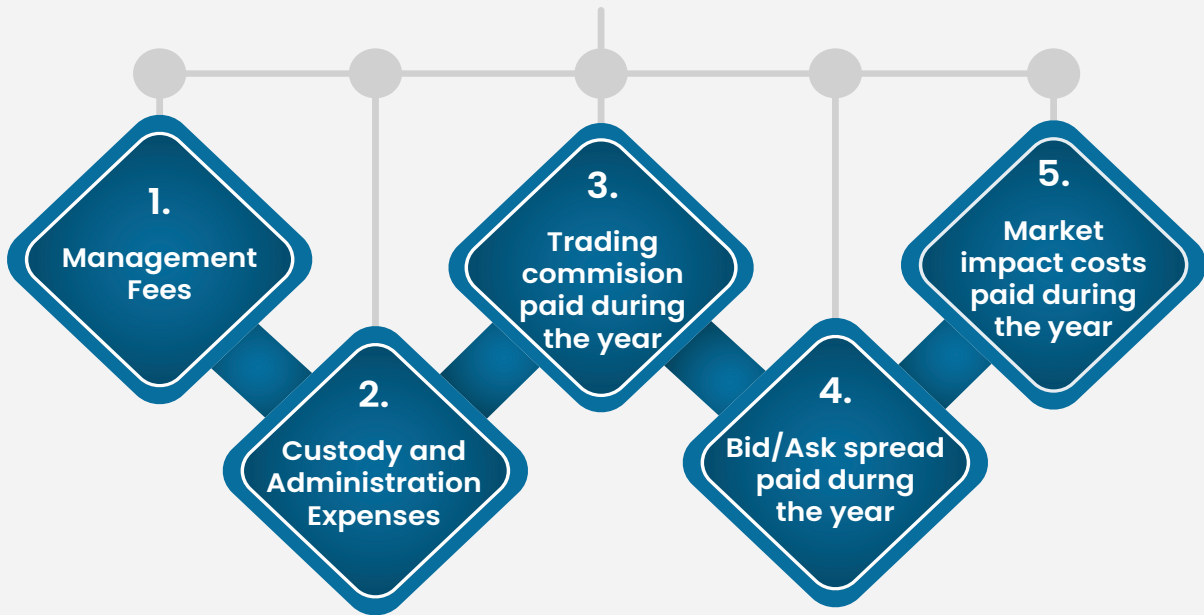

INDEX INVESTING

(A method to provide par returns with the index, subject to tracking errors & expense ratio)

The Arithmetic of Indexing

Total return of all active equity portfolios = Total market return

Minus (-)

As expenses charged to indexed assets are less than expenses charged to actively managed assets, therefore Total Return on all indexed assets may be greater than Total Return on all actively managed assets.

Why you should consider index investing?

- Elimination of non-systematic risks
- Investing in an index fund eliminates the risk of stock picking and portfolio manager selection

Reduce risk

Broad diversification

- Exposure to segments of markets, sectors and also entire markets
- Easier to buy & sell ETFs versus individual stocks

ETFs

- Indices across asset classes (equity, fixed income, commodity etc.)
- Easy to build & track portfolio

Asset allocation

Benefit from expert opinion

- Actions of a large number of market participants may lead to price discovery & index investors may benefit from this collective wisdom at a low cost.

ADVANTAGES OF ETFS

	Can be bought/sold like a stock on the exchange		Buy and Sell at real time prices
	Ability to put limit orders		Delivery in your demat account
	Minimum trading lot just one unit		Lower Expense ratio, No STT# on purchase of ETF units, STT# on sale of ETF units is 0.001% for delivery based trades **

** other than commodity ETFs, fixed income ETFs and international ETFs
#Securities Transaction Tax (STT)

Investment Strategies with ETFs

<p>Asset Allocation</p> 	<p>Given ETFs' trading flexibility and ease of transactions, ETFs are particularly one of the good tools for efficient portfolio construction through asset allocation strategy.</p>
<p>Cash Equitisation</p> 	<p>ETFs can be a good option for investment of temporary cash positions and can reduce the likelihood of a performance shortfall during transition periods.</p>
<p>Core-Satellite Strategy ETFs in the core</p> 	<p>ETFs can help to increase diversification within an investment portfolio. The 'core' of ETFs provides a way to reduce the running costs of a portfolio without deviating too much from the benchmark.</p> <p>The remaining part of portfolio 'satellite' can be actively managed through investment in selected equities or actively managed assets such as other ETFs or mutual funds. The aim can be to generate 'alpha' through picking investments that may outperform the core portion of the portfolio.</p>
<p>Actively Managing a Longer-Term Portfolio with ETFs</p> 	<p>ETFs can be used to create a broad diversified portfolio. An investor can use on active management strategies by entering and exiting into wide array of ETFs across themes, sectors and asset classes, instead of simply using buy and hold passive management strategy.</p>
<p>Active Trading With ETFs</p> 	<p>ETFs trade intraday, like stocks or bonds; they can be bought and sold real-time in response to market movements. ETFs can be used as one of the vehicle to move frequently in and out of an entire market or a particular segment niche.</p>

HOW TO INVEST IN ETFs

Trading in ETFs is very simple. It is similar to how you trade in equity shares. You can trade from your existing trading account with your broker or register yourself with a broker having membership of the exchange(s), fill up the KYC form, open a demat account, post margins and then commence trading.

*Investors should consult their financial advisers if in doubt about whether the product is suitable for them.

Risk Factors: Trading volumes and settlement periods may restrict liquidity in equity and debt investments. Investment in Debt is subject to price, credit, and interest rate risk. The NAV of the Scheme may be affected, inter alia, by changes in the market conditions, interest rates, trading volumes, settlement periods and transfer procedures. The NAV may also be subjected to risk associated with tracking error, investment in derivatives or script lending as may be permissible by the Scheme Information Document.
